

What's New: AI Assistant in Smart UI Designer

Adroit 11 Smart UI Designer | Release highlight

Get answers without leaving your workspace

Smart UI Designer now includes a built-in **AI Assistant** — a smart help chat trained on our product documentation and help files. Ask questions in plain language and get immediate guidance while you design, configure, and troubleshoot.

No more switching between the Designer, Help file, PDFs, and browser tabs to find an answer. Help is now one click away, right inside the application.

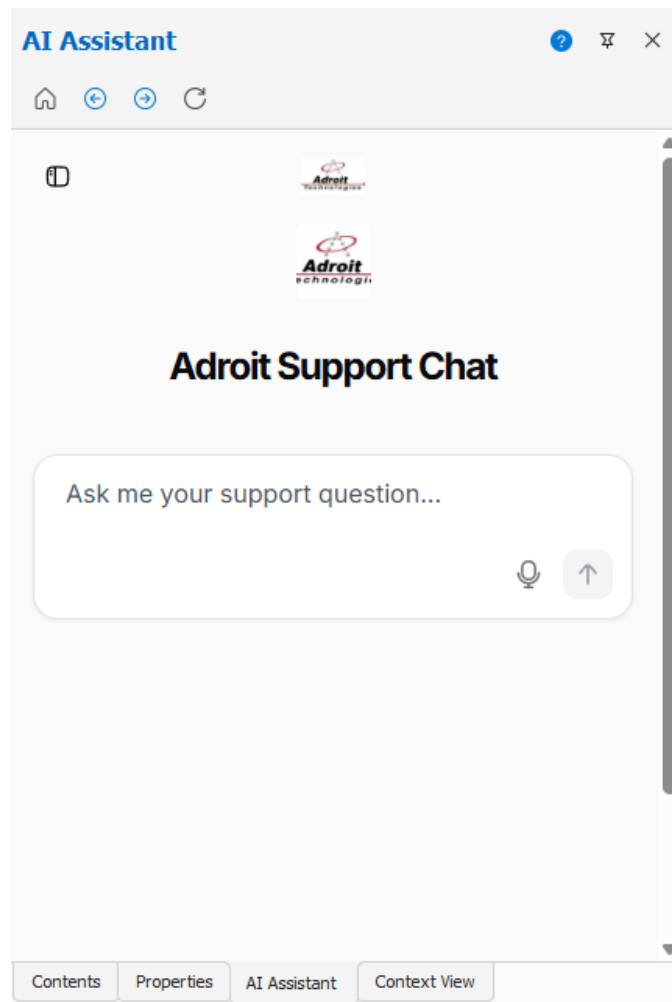

Figure 1: AI Assistant

Why we built it

Designing automation and graphic forms is complex. Even experienced users spend time searching documentation for the right menu, setting, or workflow.

The AI Assistant helps you:

- **Work faster** — get quick answers without interrupting your flow
- **Onboard more easily** — new users can ask “how do I...?” instead of hunting through manuals
- **Resolve issues sooner** — describe a problem and get relevant guidance from our official help content
- **Stay focused** — help lives in a dock panel beside your project, not in a separate window

What it does

The AI Assistant is a conversational help experience powered by [Chatbase](#), integrated directly into Smart UI Designer.

It has been trained on:

- Help files
- Product documentation
- Knowledgebase Articles
- Official user guidance

You can ask about features, workflows, terminology, and common problems — for example:

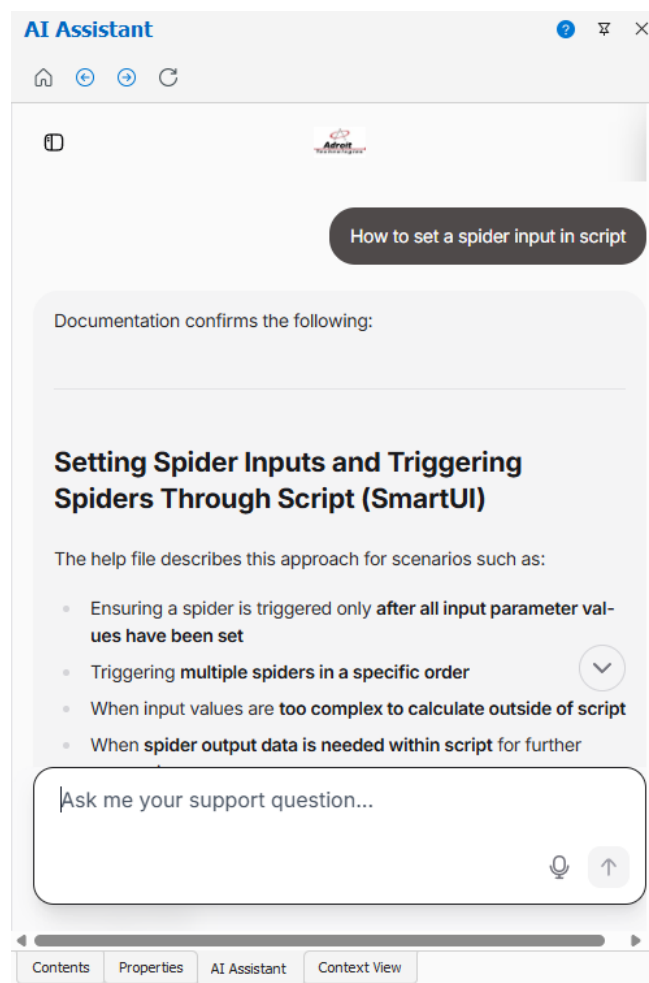

- “How do I publish a graphic form?”
- “How do I connect to the Agent Server?”
- “Why can’t I see the Properties panel?”
- “How to execute queries in script?”
- “How to trend historical datalog data?”

The assistant responds in a natural chat format, and you can ask follow-up questions to go deeper.

How to use it

1. Open **Smart UI Designer**
 2. Switch to the **AI Assistant** tab
- Or
3. Go to the **View** tab on the ribbon
 4. Click **AI Assistant** in the **Content** group
 5. Start typing your question

The panel opens on the right side of the Designer, alongside your familiar tools like Properties and Enterprise Manager. Show or hide it anytime with a single click. The AI Assistant panel is already open by default upon logging into Smart UI Designer.

Designed to fit your workflow

The AI Assistant is built into the Designer experience, not bolted on as an external tool.

- **Dockable panel** — resize, reposition, or tab it like other Designer panels
- **Simple navigation** — Home, Back, Forward, and Reload controls at the top of the panel
- **Always available** — open it whenever you need help, without leaving your project
- **Complements existing help** — works alongside Designer Help, Online Help, and the Knowledge Base

Use the AI Assistant for quick, conversational guidance. Use traditional help when you want structured topics or full reference material.

Smarter help for a smarter Designer

This release is part of our ongoing investment in usability and productivity. We want Smart UI Designer to feel more approachable, more responsive, and easier to learn — whether you're building your first graphic form or managing complex automation projects.

The AI Assistant is your **24/7 documentation companion**: trained on our content, available inside the tool you already use every day.

Get started today

Upgrade to the latest version of Adroit 11, and in the Smart UI Designer either switch to the **AI Assistant** tab or open the **View** ribbon and click **AI Assistant**.

Try asking a question about something you do regularly — you might be surprised how quickly you get the answer you need.
